

# Knowledge check

2 minutes

1. You have a reference to a Workspace named `ws`. Which code retrieves the default datastore for the workspace?

☐ `default_ds = Datastore.get(ws, 'default')`

☐ `default_ds = ws.Datastores[0]`

☒ `default_ds = ws.get_default_datastore()`

**That is correct. To get the default datastore, use the `get_default_datastore` method of the Workspace.**

2. A datastore contains a CSV file of structured data that you want to use as a Pandas dataframe. Which kind of object should you create to make it easy to do this?

☐ A datastore.

☒ A tabular dataset.

**That is correct. A tabular dataset provides the easiest way to consume structured data as a Pandas dataframe.**

☐ A file dataset.

3. You want a script to stream data directly from a file dataset. Which mode should you use?

☒ `as_mount()`

**That is correct. To stream data directly from its source, use `as_mount` mode.**

☐ `as_download()`

☐ `as_upload()`
