Beginner Data Scientist Azure Machine Learning

Learn how to register and deploy ML models with the Azure Machine Learning service.

Learning objectives

In this module, you will learn how to:

- Deploy a model as a real-time inferencing service.
- Consume a real-time inferencing service.
- Troubleshoot service deployment

[Start >](#)[⊕ Save](#)

Prerequisites

- Knowledge of Python
- Experience of training models using the Azure Machine Learning SDK

This module is part of these learning paths

[Build and operate machine learning solutions with Azure Machine Learning](#)
