

# Exercise - Using automated machine learning

5 minutes

Now it's your chance to use Azure Machine Learning's automated machine learning capabilities to train a machine learning model.

In this exercise, you'll:

- Run an automated machine learning experiment.
- Review the best performing model.

## Instructions

Follow these instructions to complete the exercise.

1. If you do not already have an Azure subscription, sign up for a free trial at <https://azure.microsoft.com> .
2. View the exercise repo at <https://aka.ms/mslearn-dp100> .
3. If you have not already done so, complete the **Create an Azure Machine Learning workspace** exercise to provision an Azure Machine Learning workspace, create a compute instance, and clone the required files.
4. Complete the **Use automated machine learning from the SDK** exercise.

### Note

There is also an exercise named **Use automated machine learning**, in which you can use the visual interface for automated machine learning. You can also complete this if you want to explore the "no-code" approach.

## Next unit: Knowledge check
