

Summary

1 minute

In this module, you've learned about the PaaS and IaaS deployment options for running databases in the cloud. You've seen how Azure Data Services provides a range of PaaS services for running relational databases in Azure. You've learned how the PaaS options provide support for automated management and administration, compared to an IaaS approach.

Additional resources

- [Choose the right deployment option](#)
- [What is a single database in Azure SQL Database](#)
- [What is Azure SQL Database managed instance?](#)
- [Data Migration Assistant \(DMA\)](#)
- [Azure Database Migration Service \(DMS\)](#)
- [Choose the right data store](#)
- [Transport Layer Security](#)
- [Transparent Data Encryption](#)
- [Always Encrypted](#)
