Knowledge check

2 minutes

Choose the best response for each of the questions below. Then select **Check your answers**.

Check your knowledge

1. What is provisioning?

- ⦿ The act of running series of tasks that a service provider performs to ✓
  create and configure a service.

  That's correct. In Azure, you must provision a service before you can use it.

- ◯ Providing other users access to an existing service.

- ◯ Tuning a service to improve performance.

2. What is a security principal?

- ◯ A named collection of permissions that can be granted to a service,
  such as the ability to use the service to read, write, and delete data.
  In Azure, examples include **Owner** and **Contributor**.

- ◯ A set of resources managed by a service to which you can grant
  access.

- ⦿ An object that represents a user, group, service, or managed ✓
  identity that is requesting access to Azure resources.

  That's correct. Azure authentication uses security principal to help determine whether a request to access a service should be granted.

3. Which of the following is an advantage of using multi-region replication with Cosmos DB?

- ◯ Data will always be consistent in every region.

- ⦿ Availability is increased. ✓

  That's correct. Replication improves availability. If one region becomes inaccessible, the data is still available in other regions.

○   Increased security for your data.
